Inverter Backbracket

Please read the installation instructions carefully before installing the wire cover.

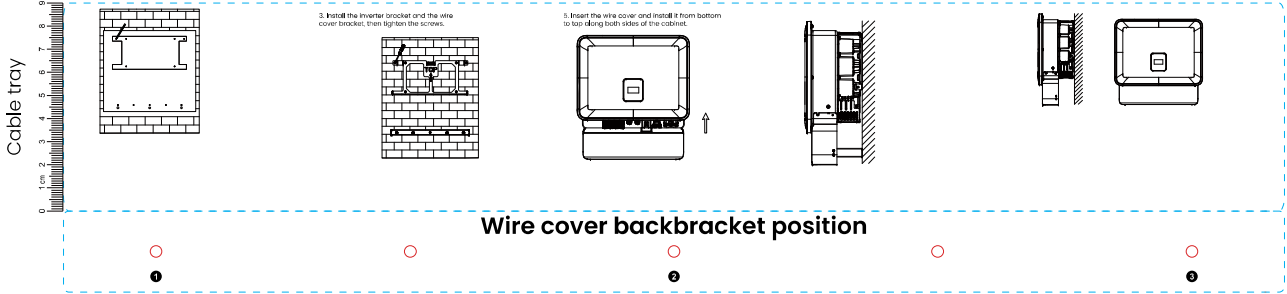

First, it is necessary to confirm the status of the inverter body, as this determines the facing method of the wire cover.
Please refer to Figure 1 and Figure 2 above:

1. See **Method I** if there are no locating pins or holes on both sides.
2. See **Method II** if there are locating pins and holes on both sides.

Method I: Installation Using Mounting Brackets

1. Use the positioning template to mark the mounting hole locations. For the wire cover bracket, prioritize the use of holes 1, 2, and 3.

Method II: Installation Using Locating Pins and Installation Holes

1. After the inverter is installed, mount the wire cover from bottom to top along the side wall of the cabinet.
